Gradebook - Direct Grade Entry from the Grid View or Submissions Page

Instructors can now enter assignment grades directly in the Grid view or Submissions page with improved accuracy and consistency. Previously, grades entered in these views were stored at the override level, which caused confusion as underlying attempts remained ungraded and continued to display the Needs Grading and New Submission flags. This update ensures that grades entered this way are properly mapped to the underlying attempt or submission when applicable.

All grades entered via file upload continue to be stored as override grades.

Assignments with Single Attempts

- **Ungraded Attempts.** When an ungraded attempt is found, the grade is stored at the attempt level, the Needs Grading and New Submission flags are cleared, and any auto-zero is removed.
- **Graded Attempts.** If the attempt is already graded, the existing grade is updated accordingly.
- **Existing Overrides.** If an override already exists, only the override is updated. No changes are made to the attempt grade.
- **No Submission.** If a student has not submitted an attempt, the grade is stored as an override.

Assignments with Multiple Attempts

- **Ungraded Attempts.** If all attempts are ungraded, the grade is assigned to the appropriate attempt based on the aggregation model:
  - First: The grade is assigned to the first attempt.
  - Last: The grade is assigned to the last attempt.
  - All (Min, Max, & Average): The grade is assigned to the last attempt. All other attempts are excluded.
- **Single Graded Attempt.** For a single graded attempt, the existing grade is updated.
- **Multiple Graded Attempts.** If more than one attempt is graded, the grade is stored as an override. The Needs Grading and New Submission labels remain unchanged.
- **Existing Overrides.** If an override already exists, the override grade is updated.
- **No Submission.** For students with no submission, the grade is stored as an override.
