

How to Create a Video Quiz in Kaltura

This guide will cover the steps of making a quiz in Kaltura using video that has already been uploaded to your MyMedia library. There are [other guides available](#) if help is needed to upload content.

Log in to Blackboard Ultra. Under the **left sidebar** menu, click on **Tools**. A new window will open, select **MyMedia**.

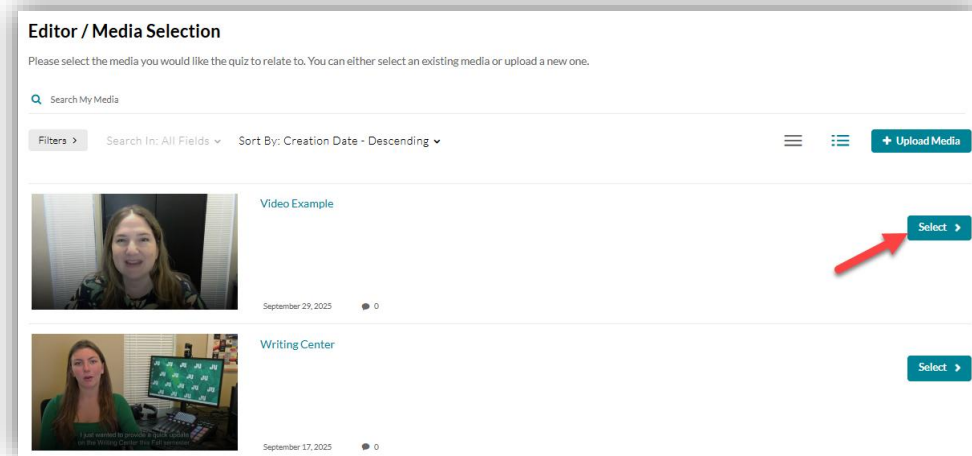

Once **MyMedia** opens you will see all the videos that have previously been uploaded. Click on **Create**. From this menu, you can **Upload** new media or create an **Express Capture** video through Kaltura. Make sure the video you want to add a quiz to is uploaded to your library and select **Video Quiz**.

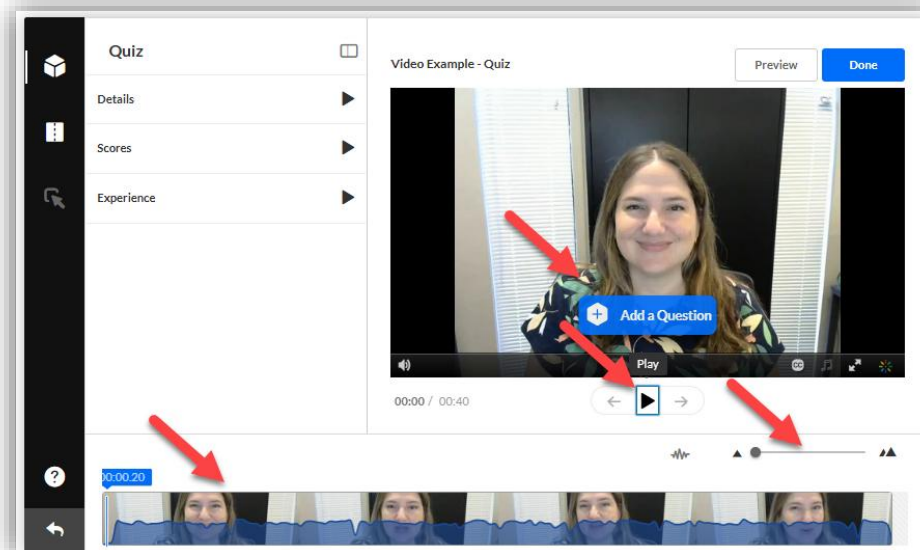

Choose **Select** to launch the Quiz editor for the video you would like to add your questions to.

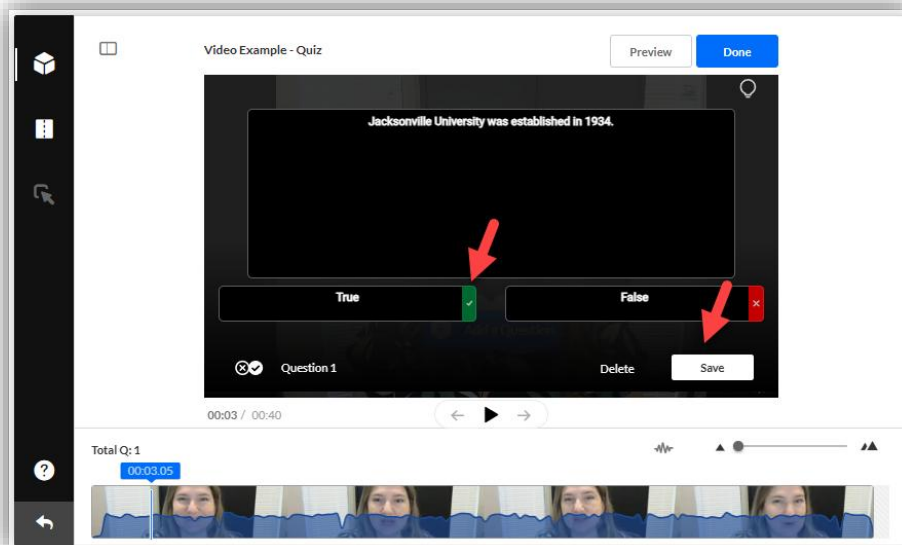

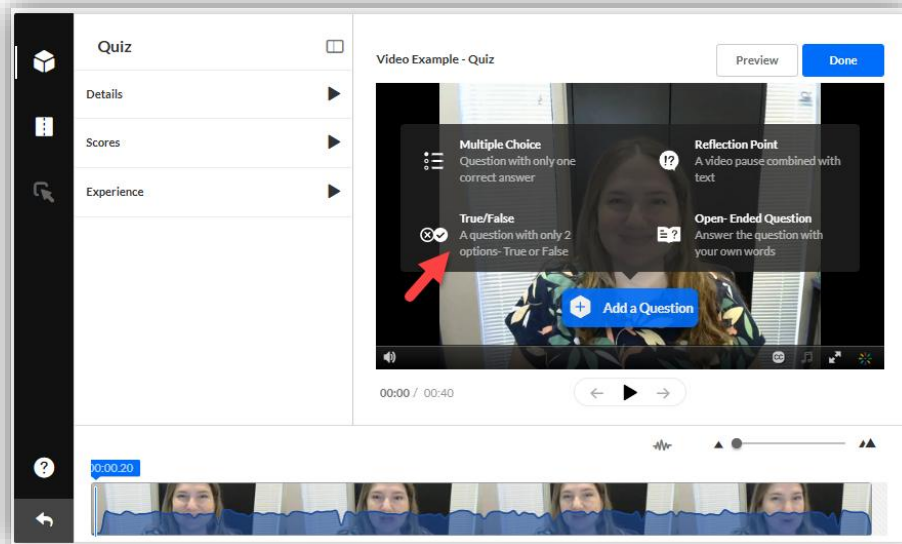

The player and quiz editor window opens, ready to begin the building process. Here, you will see the scrubber bar on the left within the timeline window. This allows you to move through the video for question placement. You may need to zoom in/out of the timeline to place the quiz on a specific frame or second within the video. The play button sits above the timeline. It is very important not to place questions too close together on the timeline. This will cause a timeline error when saving.

You will select **Add a Question** to begin with the first question.

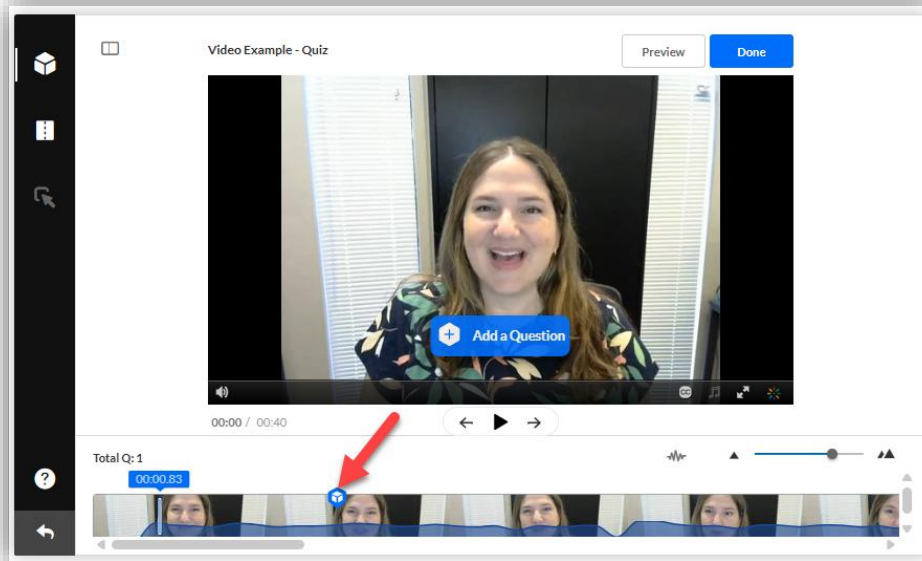

In this example, a **True/False** question was chosen as the first question. You will write the question and select the corresponding answer by clicking the green or red tab to alter the right or wrong answer. **Save** when you have finished constructing the question.

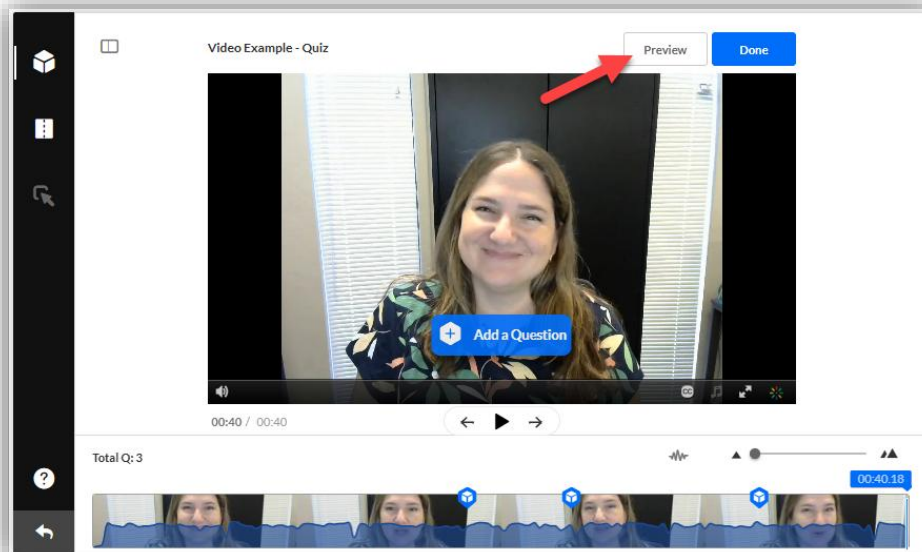

You will notice the icon of a small box showing up on the timeline. This represents the question and location on the timeline. This question can be dragged around the timeline if the question needs repositioning.

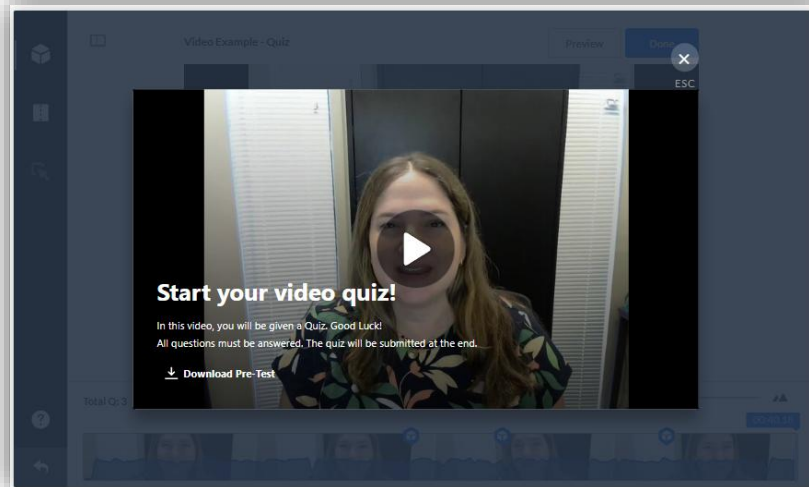

Three questions have been created in total. You can shuffle through the timeline by clicking on the vertical line/play head and moving accordingly. The questions will not show up until you preview the quiz. Choose **Preview** to review the quiz.

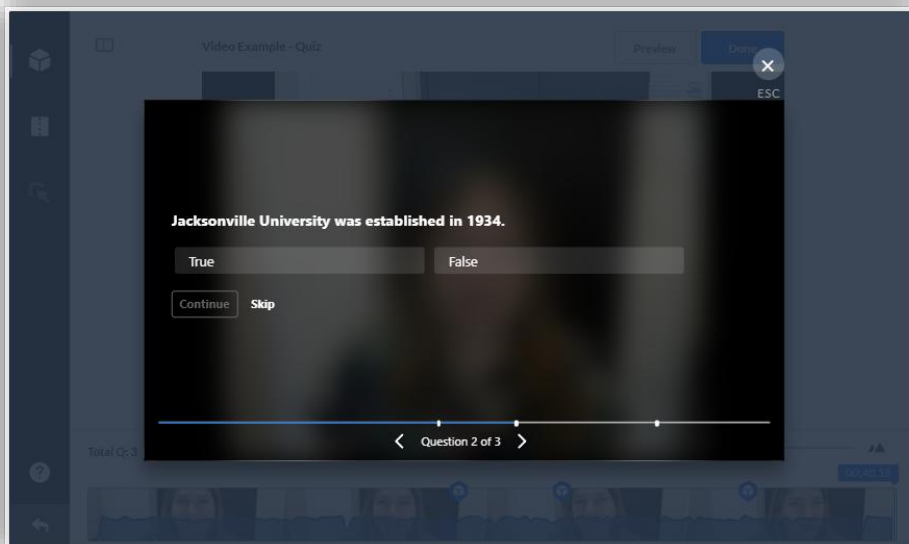

The preview will play the video in real time, but you can move through the timeline to review the quiz question elements.

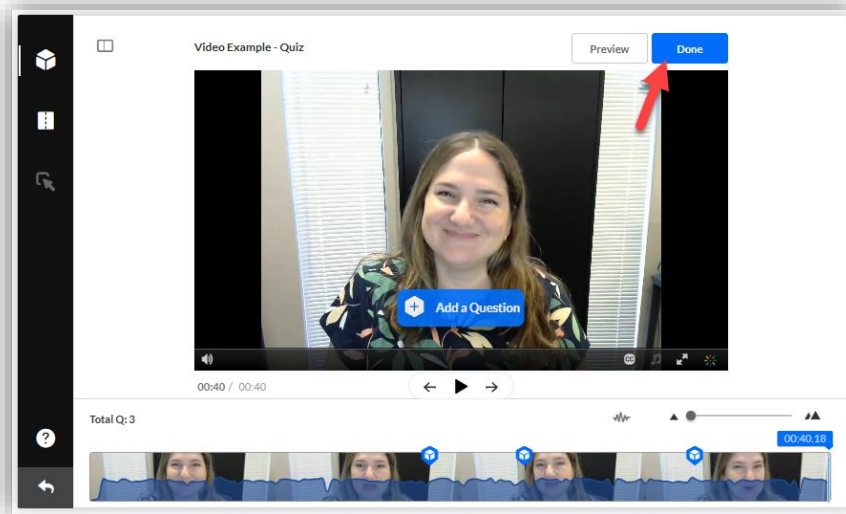

Once a question is reached, you will see the answer options, skip feature (viewer will still need to come back to the question), location of quiz questions on the timeline, and how many questions have been completed.

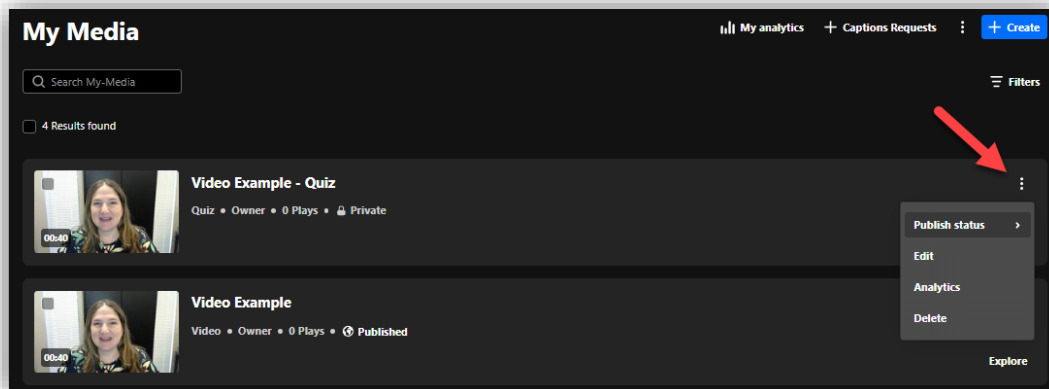

After closing the Preview, you can make any additional changes or select **Done**.

Once the quiz has been placed in your **MyMedia** library, you will see the original still intact. No changes are made to the original media. You can add captions, publish to allow other instructors/students to view the quiz, or delete the video quiz altogether. Publishing does not embed the assessment into the course.

On the quiz video panel that has been created, you will see the analytics, edit command, and delete. If the content is published as a viewable file to the class, you can see all the data related to views and access as an example.
