

Image Annotation in Hypothesis

Image annotation lets Hypothesis users create rectangular areas, or to create a pin, as a way of indicating the part of the document their annotation references. A thumbnail of the selection area (or the area around a pin) will appear on the annotation Card in the same place where the selected text for a text annotation typically appears.

Open your Hypothesis assignment. In the Hypothesis sidebar, click the Rectangle or Pin buttons to activate image annotation. The **Rectangle** allows a user to choose a rectangular area in the document to annotate. The **Pin** allows a user to annotate a particular point in the document.

Select an area or a point in the document that you would like to annotate. This will open the text editor in the annotation card where you can write your annotation. Once you've added text to your annotation, click **Post**. The following image shows an annotation created from the Rectangle Selection Tool.
