

## What is it?

Hypothesis is a tool that allows for *social annotation*, the ability for students to annotate an electronic document as they read, and for those annotations to be available to their classmates for comment. This is a way to bring the long-standing practice of writing in the margins to electronic texts in a way that is reasonably easy to use and adds a level of collaboration by allowing others to see and comment on what you write. Hypothesis allows for any webpage or OCR document to be annotated, and so it makes this function available to almost any text. Annotations can include text highlights as well as comments.

## Why is this useful?

Social annotation is useful for helping students to understand your course material, improving their reading skills generally, and building community among your students. Especially in an online course, where it is important to be **more deliberate about community-building strategies**, social annotation can be a meaningful addition to your class and give students an additional way to connect around course material.

Adding annotations to an electronic document encourages students to read closely and stay engaged with the material. Students appear to spend more time with the material when they are required to make annotations and may read the article multiple times, annotating as they go back through it. As students ask and answer each other's questions, **they build a resource for understanding the text**. Students use the annotated document as a reference, looking through comments to see if their questions have been answered, and answering questions themselves.

Social annotations systems like Hypothesis can also help build a sense of community in your course, with both text-directed and peer-directed comments often added to a document and may be **better suited to replicating in-person interaction than an LMS discussion forum**.

### Adding Content to the Content Collector

The first step before <u>Hypothesis</u> can be used to annotate a .PDF is to make sure the file has been uploaded to the **Content Collection**. Within the Course Content you will select the 3 ellipses on the far right.

When uploading new content, the second tab will allow individual and .zip files to be uploaded to add to the course for use within the modules.

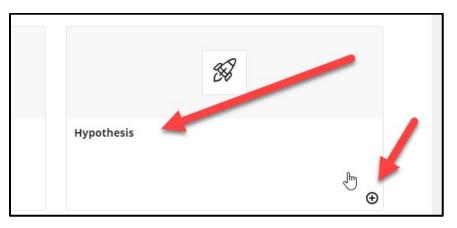

Initially, when creating a **Hypothesis** assignment, it is advisable that you have a content module folder with a title such as "Session 1" in the example below. This helps with the organization and layers of content found in the module folder. A hypothesis assignment can be built out of the folder and dragged into the appropriate folder if needed.

	Digital design is an umbrails term that encompasses several different roles and disciplines. It's the process of mapping out the took and feet of the content that people view and interact with on a digital interface. Digital designers do more than design graphics: it's all about creating designs cartified for specific devices, tailing into account factors in its user experience, interactivity, and overall seathic balance.		+	Matthew Pate Only me J     Each of the roles that fail within the spi     design involves the core practice ofdes	igning what pec More
	Each of the roes that fail within the sphere of digital design involves the core practice of designing what people see on a screen, but the most common digital design roes have a more interactive element to their work.
